

Title:

Nature is charging us our mistakes

Author:

Luis Arturo Acevedo Acevedo

Nature is charging us our mistakes

My fundamental thanks to those who live all the processes of my life, my family: to my wife Eliana, who always understand and patiently respect my immersion for hours between books, leaving other pleasures for later, for example, the Sunday walk or the summer ice cream. To them my infinite thanks for your understanding and support.

To my parents and to our productive talks and useful life advice, where I often took refuge pleasantly.

To my brothers, of whom I have learned a lot, who unknowingly infected me with the passion for writing?

To the work friends who trusted me to carry out the knowledge and translate them into books

To the acquaintances, to their questions, concerns and demands, that they have taught me so much.

To all those entrepreneurs who fundamentally taught me that dreams with action are productive realities.

To my clients, who every day allow me to work in order to elaborate better products

To all of you who invest their time in reading these ideas, thank you very much for being there,

and welcome

INDEX

## 1. INTRODUCTION

## 2. HURRICANES AND THE MOST DESTRUCTIVE OF HISTORY

Global warming, deforestation, environmental pollution

## 3. THE LAND SLIDES AND THE MOST DESTRUCTIVE OF HISTORY

Deforestation, invasion of high-risk lands, blockage and diversion of rivers due to man

## 4. THE FLOODS AND THE MOST DESTRUCTIVE OF HISTORY

Deforestation, construction in areas prone to flooding again,

Global warming

## 5. VOLCANIC ERUPTIONS AND THE MOST DESTRUCTIVE OF HISTORY

Construction of cities and towns near volcanoes, invasion of land of high volcanic risk, ignorance and oblivion of ancient volcanic eruptions in the same regions

## 6. EARTHQUAKES AND TSUNAMIS AND THE MOST DESTRUCTIVE OF HISTORY

Construction of cities and towns near areas of high seismic risk, construction of houses and buildings without seismic norms, ignorance and forgetting of old earthquakes in the same regions

## 7. THE NEXT GREAT CATAclyISM

The most unstable zone of the Pacific fire belt

## INTRODUCTION

First of all, the meaning of writing this book is because I witnessed a great tragedy in Colombia as was the landslide in the neighborhood of Gabriela in the municipality of Bello in the department of Antioquia in the country of Colombia, the mere fact of seeing housing and construction in a high-risk area, under a ravine with a history of water seepage was like a time bomb that sooner or later had to explode

In the distance I had to see that day the power of nature and how it destroyed everything around it its great magnitude and power and to see how human beings are invading these areas that had to be respected and be away from them would be the best solution

Every year whenever we see the news we are witnessing great natural catastrophes, which are increasingly larger, longer and more destructive, and that is where the question arises as to what is causing these phenomena to have greater power than what they were previously

The big cities that grow every year more in population, housing, roads, buildings, more parks and buildings for the distraction are stealing from nature trees, lakes, green areas, ecosystems,

native animals, biodiversity, and this is altering the balance natural causing the protection we had before the natural shocks and staying out in the open

Human beings are invading areas and places that were previously forbidden to inhabit given their risk and their dangerous antecedents and also the past is witness to great tragedies which can not be ignored nowadays and it is better to review that past to know that we are invading areas that should be just nature

At present we have seen that many events or very surprising natural phenomena have occurred throughout the planet, Hurricanes, Avalanches, Floods, Volcanic Eruptions, Tsunamis and earthquakes affecting large cities, destroying homes, many human beings have died because of these phenomena; An example is the earthquake that occurred in Mexico, in which many people died and with it produced a series of events such as the eruption of the Popocatepetl Volcano, this one issued a red fumarole after the region was affected by the devastating earthquake.

Also the hurricane Maria that hit with great intensity the island of Puerto Rico, where many people died, all these events together could carry

out a destruction of a large part of the planet, due to the repeated events throughout our planet.

Can a Cataclysm occur? This makes human beings think that the end of time is coming or, better still, that the apocalypse is being fulfilled.

Because nature is charging us our mistakes?

It will be because we as human beings do not give importance and we only look for our own wellbeing, there are very few countries that have a culture of caring for their country, and they are taking very serious measures to prevent and control pollution, in the case of large countries there is a high pollution index such as Japan, for its innumerable amount of vehicles, its large factories, the human being is currently being trained to have power and wellbeing itself whatever else.

It is truly alarming the situation we are going through, but it is well known that this destruction is due in large part to our irresponsibility, why do I say this? Because the simple fact of throwing a paper, a bottle on the ground, we are building to deterioration of our planet.

The indiscriminate burning, the lack of control of accidental oil spills, the mining tailings, we must create awareness of the damage we are doing and

we are doing to ourselves, because we are polluting our planet which is on board a collapse, and there the explanation of why nature is giving us back.

The best thing to do is to recount these great tragedies and create a collective consciousness of how to plan better where to live, of governments taking measures to better locate homes, cities, roads and start creating natural areas again. Natural reserves and clearing areas that is very dangerous with a history of great tragedies

Here are the worst tragedies of recent years, the fault of man and his imbalance to the environment;
